Please search the following as soon as possible for application with serial number 09/762,767

- SEQ ID NO:1 and 3, against all commercial nucleic acid databases including issued patents database and 1. pending application database and provide a print of all results.
- 2. SEQ ID NO: 2 and 4, against all commercial protein databases including issued patents database and pending application database and provide a print of all results.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao, Ph.D. **Biotechnology Patent Examiner** Art Unit 1652, Room 10A11 Mail Box in 10D01 Crystal Mall 1, USPTO.

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being put and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                          Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel purified human soluble guanylate cyclase alphal/betal (hagCalphal/betal). The products of the invention have antiarteriosclerotic, vasotropic and hypotensive activity. Nucleic acid sequences encoding the alphal and/or betal subunit are useful for somatic gene therapy of arteriosclerosis and restenosis, ischemia (infarct), peripheral arterial occlusive disease and arterial hypertension.

Antibodies to hagCalphal/betal can be used for diagnosis of aberrant hagCalphal/betal expression in human tissues. This sequence represents the human soluble guanylylcyclase alphal subunit described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; guanylylcyclase alphal; hsGCalphal; hsGCbetal; soluble; guanylylcyclase betal; antiarteriosclerotic; vasotropic; hypotensive; gene therapy; arteriosclerosis; restenosis; ischemia; diagnosis; peripheral arterial occlusive disease; arterial hypertension.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to methods of detecting a prostate CC cancer-associated transcript in a cell from a patient. The method CC comprises contacting a biological sample from the patient with CC prostate cancer-associated polynucleotides (designated PC genes) that Selectively hybridise to a sequence that is at least 80% identical CC to them. The prostate cancer-associated polynucleotide sequences CC are differentially expressed in prostate tumour tissue or in CC prostate cancer and are derived from the tissues of various CC organisms such as humans or other mammals (e.g. mice, sheep and dogs). CC The methods of the invention are useful for diagnosing and treating CC prostate cancer in mammals. The prostate cancer, as well as for CC identifying modulators of prostate cancer or agents that inhibit CC useful for diagnosing or treating prostate cancer, as well as for CC identifying modulators of prostate cancer or agents that inhibit CC prostate cancer. The nucleic acid sequences are particularly useful CC in gene therapy, as a vaccine or in antisense applications.

ABG61800-ABG61944 represent prostate cancer-associated proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                         The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer, as well as for identifying modulators of prostate cancer are particularly useful in gene therapy, as a vaccine or in antisense applications.

C ABG61800-ABG61944 represent prostate cancer-associated proteins.

The inventuable of developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16177-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel purified human soluble guanylate cyclase alphal/betal (hsCcalphal/betal). The products of the invention have antiarteriosclerotic, vasotropic and hypotensive activity. Nucleic acid sequences encoding the alphal and/or betal subunit are useful for somatic gene therapy of arteriosclerosis and restenosis, ischemia (infarct), peripheral arterial occlusive disease and arterial hypertension. Antibodies to hsGcalphal/betal can be used for diagnosis of aberrant hsGCalphal/betal expression in human tissues. This sequence represents the human soluble guanylylcyclase betal subunit described in the method of the human soluble guanylylcyclase betal subunit described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; guanylylcyclase alphal; hsGCalphal; hsGCbetal; soluble; guanylylcyclase betal; antiarteriosclerotic; vasotropic; hypoten gene therapy; arteriosclerosis; restenosis; ischemia; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                              capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 5844; 21pp + Sequence Listing; English.

```

```
The present sequence represents soybean cyst nematode guanylyl cyclase-2 Themoreceptor, designated HG-gcy-2. HG-gcy-1 polynucleotides and polypeptides are useful as active agents for controlling plant feeding nematodes. They can be used to screen for compounds that have the ability to disrupt parasitic nematode feeding or chemotaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated polynucleotide encoding nematode guanylyl cyclase chemoreceptor, useful for controlling plant feeding nematodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Amino acid sequence of a guanylyl cyclase-2 chemoreceptor (HG-gcy-2).

                                                                                                                                                                                                                                                                                                                                                                                                       GC-A and GC-B, which binds heat stable enterotoxin. These proteins are enterotoxin receptors which may be used as a therapeutic to control intestinal fluid permeation as well as abnormal conditions caused by heaterfally religious with as abnormal conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Guanylyl cyclase; GC-C; heat stable; mucosa; polyA+ RNA; PCR; enterotoxin binding domain; antibody; diarrhoea;

    The sequence was derived from the DNA encoding natriuretic peptide receptor B, NPRB, having guanyl cyclase (GC) activity and protein kinase activity. The DNA can be inserted into expression vectors for the prodn. of the protein, opt. after being mutated to produce NPRB analogues. The protein has a mol wt. of 115 kD (calculated Mr.

The protein (or variants) can be used in treatment constriuretic peptide disorders, and also to isolate peptides usin affinity chromatography. Antibodies with affinity for NPRB can also be prepd. An analogue, NPRBDKC, comprising only AAs 1-433 the mature protein, is also claimed, as well as variant describe in AAR10867.
                                                                                                                                                                                                                                                                                                                                                                                              AAR10867 standard; Protein; 1047

                                                                                                                                                                                                                                                                                                                                                                    The mutant was produced by modifying the DNA encoding the native sequence. The protein has guanyl cyclase (GC) activity protein kinase activity. The DNA can be inserted into express vectors for the prodn. of the NPRB analogue. The protein can used in treatment of natriuretic peptide disorders, and also t isolate peptides using affinity chromatography. Antibodies wi sefinity for NPRB can also be prepd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Editor's note: the AAs replaced in the sequence do not correspond to those of NPRB given in the specification (see p.27, 1.23-27; figs. 1 and 2), but instead to AAs in the sequence provided for NPRA (fig. 2). The origin of the AAs to be substituted is not clear; they may be taken from the sequence of rat NPRB (p.8, 1.18; p.9, 1.33) or rat NPRA (p.27, 1.20). The substitution indicated on p.9, 1.33, i.e. "Phe644" is thought to be an error and should read

These proteins are enterotoxin receptors which may be used as a therapeutic to control intestinal fluid permeation as well as abnormal conditions caused by bacterially released enterotoxin. The binding domain of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                      by bacterially released enterotoxin. The binding domain of the proteins, or antibodies to the proteins, can be used to eliminate diarrhoea. The proteins may be used to isolate ligands and to scr for antagonists of toxin binding.

A method for CC haplotyping the NPR1 gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and determining whether one CC of the copies of the gene is defined by one of the NPR1 haplotypes given in the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype cc pairs can be assigned to specific genotypes. An association between a CC identified by comparing the frequency of the NPR1 gene can be critical and a haplotype or haplotype pair of the NPR1 gene can be comparing the trait with the frequency of the haplotype pair in a reference population, where a higher haplotype frequency in the trait population indicates the trait is associated with the haplotype or haplotype pair. NPR1 and its corresponding DNA are used for studying the expression and function of NPR1, for use in screening cc chypertension. The sequences are also useful for studying the effect of variation on the biological activity of NPR1 as well as on the binding affinity of candidate drugs targeting NPR1. This sequence represents the

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

$33098

guanylate cyclase (EC 4.6.1.2), soluble, 81K chain - human
C;Species: Homo sapiens (man)
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 16-Jul-1999
C;Accession: $23098
R;Gluil1, G; Scholl, U; Bulle, F; Guellaen, G.
FEBS Lett. 304, 83-88, 1992
A;Title: Molecular cloning of the cDNAs coding for the two subunits of solubl
A;Reference number: $23097; MUID:92316204; PMID:1352257
A;Accession: $23098
A;Molecule type: mRNA
A;Residues: 1-717 <GIU>
A;Cross-references: EMBL:X66534; NID:g31683; PIDN:CAA47145.1; PID:g31684
C;Superfamily: soluble guanylate cyclase; guanylate cyclase catalytic domain
C;Keywords: heterodimer; phosphorus-oxygen lyase
F;430-658/Domain: guanylate cyclase catalytic domain homology <GCC>

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
